Attorney Docket: 2797P

Amendments to the Claims

This listing of claims will replace all prior version, and listings, of claims in the application.

Listing of Claims:

1. (Currently amended) A single I/O computer USB interface to a first host computer of a first star network comprising:

a USB root hub host port of the first host computer; and

a <u>USB</u> peripheral port wherein the <u>USB</u> peripheral port and the <u>USB root hub</u> host port are both active at the same time, wherein the <u>USB root hub</u> host port and the <u>USB</u> peripheral port are defined using predetermined signals.

Please cancel claim 2.

- 2. (Cancelled)
- 3. (Previously presented) The interface of claim 1 wherein two connected devices utilizing the single I/O interface can have a peer-to-peer connection via the host port and peripheral port.
- 4. (Previously presented) The interface of claim 1 wherein two connected devices utilizing the single I/O interface can have a one-to-many relationship via either the host port and/or the peripheral port.
 - 5. (Original) The interface of claim 1 wherein a device only needs one physical

I/O port via the connector.

- 6. (Original) The interface of claim 1 wherein the predetermined signals comprise host differential data lines and peripheral differential data lines.
 - 7. (Currently amended) A USB network comprising:

a first device; the first device including a single computer USB #O interface to a host computer of a first star network, the interface including a USB root hub host port of the first host computer; and a USB peripheral port to a second host computer of a second star network, wherein the USB root hub host port and the USB peripheral port are defined using predetermined signals; and

a second device for communicating with the first device, the second device using the predetermined signals, wherein the <u>USB</u> peripheral port and the <u>USB root hub</u> host port are both active at the same time.

- 8. (Original) The USB network of claim 7 wherein the predetermined signals are within a standard.
- 9. (Original) The USB network of claim 8 wherein the standard comprises the universal serial bus (USB) standard.
- 10. (Original) The USB network of claim 9 wherein the first and second devices can be any of a camera, computer, personal digital assistant, laptop device, handheld device, printer, and cellular telephone.

- 11. (Original) The USB network of claim 7 wherein the predetermined signals comprise host differential data lines and peripheral differential data lines.
 - 12. (Currently amended) A device comprising:

a processor; and

a single I/O <u>computer USB</u> interface to a first host computer of a first star network coupled to the processor, the <u>interface</u> comprising a <u>USB root hub</u> host port of the first host computer; and a <u>USB</u> peripheral port to a second host computer of a second star network, wherein the <u>USB root hub</u> host port and the <u>USB</u> peripheral port are defined using predetermined signals and wherein the <u>USB</u> peripheral port and the <u>USB root hub</u> host port are both active at the same time.

- 13. (Currently amended) The device of claim 12 wherein the single <u>I/O</u> <u>computer USB</u> interface requires a connection to only one physical I/O port if the device is coupled to a device with a connector that includes a <u>USB</u> host port and a <u>USB</u> peripheral port which are defined using the predetermined signals.
- 14. (Original) The device of claim 12 wherein the predetermined signals comprise host differential data lines and peripheral differential data lines.
